RRP \$2,495

- Available as Automatic or Semi-Automatic
- CPR Depth and rate monitoring
- Clear CPR Voice coaching and LCD screen showing instructions
- Self-monitoring
- Eligible for the Heroes for Life program
- 7 year warranty

Heartsine 500P
RRP \$2,695

- Semi-Automatic shock delivery
- Portable, lightweight & rugged
- Easy-to-understand visual & voice prompts
- CPR Feedback on rate and depth
- Self-test function with optional WiFi connectivity
- Forward Hearts program eligible
- 8 year warranty

Zoll AED 3
RRP \$2,995

- Available as Automatic or Semi-Automatic
- CPR Feedback, Rhythm & Depth
- Colour touch screen with rescue images
- RapidShock Analysis
- Adult/Child universal pads
- Self test function and WiFi connectivity
- Eligible for the Heroes for Life program
- 8 year warranty

► Why buy an AED?

• To save lives

Sudden Cardiac Arrest (SCA) is one of the leading causes of death in Australia with less than a 10% survival rate out of the 30,000 people that will suffer an SCA this year.

SCA doesn't discriminate by age, sex or lifestyle and can strike anyone, anytime, anywhere.

• It's the best chance of survival

An AED is the only effective treatment to restore a regular heart rhythm and give the best chance of survival.

• An AED is easy to use

With the ability to provide clear, concise instructions, an AED is easy to use even for someone with no medical or First Aid training.

► Why buy from St John NT?

• We're local & accessible

We're based in the Territory and we have retail outlets in Alice Springs & Darwin. We offer a complete solution and if you ever need to replace your pads or a battery, we'll be here to supply them.

• We won't forget to check your AED

We also register your AED with the Triple Zero (000) Emergency Call Centre and our First Responder app so that your AED can be located when it's needed.

• You're supporting the NT community

When you buy an AED from St John NT, you're supporting the work of our St John Volunteers in the NT. Your money stays here.

► How does an AED work?

Early access to defibrillation (an electric shock to the heart) can be a life saving measure in the event of a person suffering a Sudden Cardiac Arrest.

For the absolute best chance of survival, defibrillation must be carried out in the first few minutes after a person suffers an SCA.

Once activated, the AED delivers clear, natural voice instructions to guide users through each step of defibrillation and cardiopulmonary resuscitation (CPR).

Integrated pads placed on the patient's bare skin transmit information to the AED, which senses and adapts to the user's actions every step of the way.

Defibrillation will not be delivered unless the patient needs it – you can't accidentally shock a patient.
